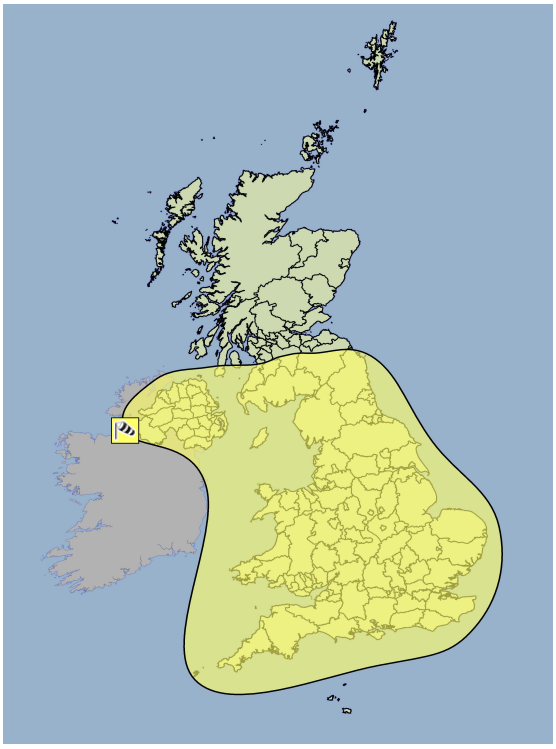
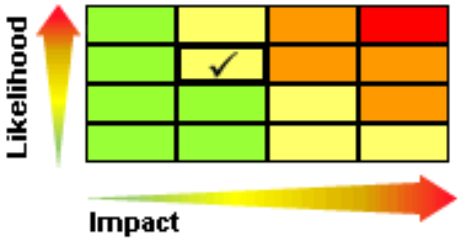
National Severe Weather Warning Service





Chief Forecasters Assessment
Another low pressure system is entering its deepening phase as it runs quickly eastwards across southern Scotland today, producing a further swathe of very strong winds on its southern flank; the low, at time of writing, is currently a little deeper than earlier expectations. There is likely to be a core of stronger winds immediately south of the low pressure track, which, still seems most likely to affect areas around the northern part of the Irish Sea and might produce a few larger impacts there than elsewhere.

Strongest winds will reach most areas by the end of the morning, before gradually easing from the west during the afternoon and evening.

The Met Office have issued a **Yellow Warning** of **Wind**

Valid from **10:10 on Sun, 29th Nov 2015** until **18:00 on Sun, 29th Nov 2015**

Sunday will see very windy weather sweep across Northern Ireland, Wales, England and parts of southern Scotland, with severe gales expected to affect some areas. Inland gusts of 50 to 60 mph will occur in some areas, but possibly reaching around 65 mph for parts of inland Northern England and the far south of Scotland, where isolated medium impacts are possible. Gusts around western coasts could locally exceed 75 mph, this most likely in coastal areas of north Wales, northwest England and Dumfries and Galloway. There is a lower probability of similar gusts briefly affecting coastal northeast England as the low clears away east, early this afternoon.

This is an update to the warning originally issued on Friday, mentioning increased gust strengths and expected impacts across parts of Northern England and the far south of Scotland.

Please be aware of the potential for disruption due to the gales and severe gales, particularly for the areas highlighted int eh words above.
